
Environmental Policy

December 2021

Enerpac Tool Group is a global market leader in high pressure hydraulic tools, controlled force products and solutions for precise positioning of heavy loads.

Our experience, comprehensive product range and on-site service teams support our global customers via a network of strategically placed locations and a team of 2000+ employees.

We will continually review the Company's environmental aspects and impacts and endeavour to minimize its impact on the environment and prevent pollution. In doing so, we will take into account all applicable legislation, regulatory requirements and best practices and consider the interests and well-being of our customers, employees, suppliers, communities and other stakeholders. Our pursuit of these objectives is a process of continuous improvement and relies primarily on the systematic identification, assessment and control of environmental risk.

We inform and instruct our employees on matters relating to the environment and the contents of our documented Management System as well as instill a duty of environmental responsibility in all employees.

We will establish and periodically review environmental objectives and targets, including through monitoring, measuring and conducting regular inspections and audit, and will implement actions to reduce environmental impacts. Our Leadership Team will ensure sufficient financial and appropriately skilled human resources are available to support these activities.

Our Leadership Team will review this policy and Enerpac's strategy, goals and objectives at an annual management review. They will also use the tools and systems at their disposal and commit sufficient resources to maintain our environmental management systems.

This policy is available upon request to all interested parties.

Paul Sternlieb
President and Chief Executive Officer
